

Summary

In this chapter, you learned to develop a note-taking application that extracts a note from a user's command and saves it to a SQLite3 database. You then built a note-retrieval system that lets you retrieve the saved notes by giving another command.

In the next chapter, you learn how to develop a voice-controlled interface to access Twitter with Melissa's help. You also study how to build a voice-controlled image uploader that can upload images to Imgur (an image-upload web site).
