

- Schatten p -norm, 749
- Schauder bases, *see* total orthogonal family
- Schmidt, 740
- Schur, 1529
 - complement, 1529, 1530
- Schur complement, 283
- Schur norm, *see* Frobenius norm
- Schur product, 1917
- Schur's lemma, 564
- Schur's trick, 1532
- screw motion, 976
- SDR, *see* system of distinct representatives
- second-countable
 - definition, 1364
- second-order derivative, 1438
- self-adjoint linear map, 612, 622, 624
 - definition, 456
- self-concordant
 - (partial) convex function, 1704
- self-concordant function
 - on \mathbb{R} , 1704
- semilinear map, 516
- seminorm, 326, 524
- sending objects to infinity, 909
- sequence, 64, 1367
 - normed vector space, 362
 - convergent, 362, 376
- series
 - absolutely convergent
 - rearrangement property, 364
 - normed vector space, 363
 - absolutely convergent, 363
 - convergent, 363
 - rearrangement, 364
- sesquilinear form
 - definition, 516
- sesquilinear map
 - continuous, 1660
- (n, s) -set, 951
- set of lines through the origin, 861
- shear, 820, 821
- short exact sequence, 834
- shrinkage operator, 1898
- signal compression, 141
 - compressed signal, 142
 - reconstruction, 142
- signed volume, 219
- similar matrix, 130
- similarity, 943
- similarity structure, 943
 - definition, 941
- simple graph, 702, 704
- simplex
 - n -simplex, 817
- simplex algorithm, 1569, 1578
 - computational efficiency, 1598
 - Hirsch conjecture, 1598
 - cycling, 1569, 1583
 - eta factorization, 1588
 - eta matrix, 1588
 - full tableaux, 1589
 - pivot element, 1589
 - iteration step, 1586
 - Phase I, 1585
 - Phase II, 1585
 - pivot rules, 1582
 - Bland's rule, 1583
 - lexicographic rule, 1583
 - random edge, 1584
 - steepest edge, 1584
 - pivot step, 1581
 - pivoting step, 1572, 1578
 - reduced cost, 1589
 - strong duality, 1614
- singular decomposition, 56
 - pseudo-inverse, 56
- singular value decomposition, 356, 479, 733, 747
 - case of a rectangular matrix, 745
 - definition, 742
 - singular value, 356
 - square matrices, 742
 - square matrix, 740
- singular values, 56
