

These basis vectors can be arranged as the rows of the following matrix:

$$\begin{pmatrix} e_1^{r+1} & \cdots & e_{n_{r+1}}^{r+1} & & & & & & & & \\ \vdots & & \vdots & & & & & & & & \\ e_1^r & \cdots & e_{n_{r+1}}^r & e_{n_{r+1}+1}^r & \cdots & e_{n_r}^r & & & & & \\ \vdots & & \vdots & \vdots & & \vdots & & & & & \\ e_1^{r-1} & \cdots & e_{n_{r+1}}^{r-1} & e_{n_{r+1}+1}^{r-1} & \cdots & e_{n_r}^{r-1} & e_{n_{r+1}}^{r-1} & \cdots & e_{n_{r-1}}^{r-1} & & \\ \vdots & & \vdots & \vdots & & \vdots & \vdots & & \vdots & & \\ \vdots & & \vdots & \vdots & & \vdots & \vdots & & \vdots & & \\ e_1^1 & \cdots & e_{n_{r+1}}^1 & e_{n_{r+1}+1}^1 & \cdots & e_{n_r}^1 & e_{n_{r+1}}^1 & \cdots & e_{n_{r-1}}^1 & \cdots & \cdots & e_{n_1}^1 \end{pmatrix}$$

Finally, we define the basis (e_1, \dots, e_n) by listing each column of the above matrix from the bottom-up, starting with column one, then column two, *etc.* This means that we list the vectors e_j^i in the following order:

For $j = 1, \dots, n_{r+1}$, list e_j^1, \dots, e_j^{r+1} ;

In general, for $i = r, \dots, 1$,

for $j = n_{i+1} + 1, \dots, n_i$, list e_j^1, \dots, e_j^i .

Then because $f(e_j^1) = 0$ and $e_j^{i-1} = f(e_j^i)$ for $i \geq 2$, either

$$f(e_i) = 0 \quad \text{or} \quad f(e_i) = e_{i-1},$$

which proves the theorem. \square

As an application of Theorem 31.16, we obtain the *Jordan form* of a linear map.

Definition 31.7. A *Jordan block* is an $r \times r$ matrix $J_r(\lambda)$, of the form

$$J_r(\lambda) = \begin{pmatrix} \lambda & 1 & 0 & \cdots & 0 \\ 0 & \lambda & 1 & \cdots & 0 \\ \vdots & \vdots & \ddots & \ddots & \vdots \\ 0 & 0 & 0 & \ddots & 1 \\ 0 & 0 & 0 & \cdots & \lambda \end{pmatrix},$$

where $\lambda \in K$, with $J_1(\lambda) = (\lambda)$ if $r = 1$. A *Jordan matrix*, J , is an $n \times n$ block diagonal matrix of the form

$$J = \begin{pmatrix} J_{r_1}(\lambda_1) & \cdots & 0 \\ \vdots & \ddots & \vdots \\ 0 & \cdots & J_{r_m}(\lambda_m) \end{pmatrix},$$

where each $J_{r_k}(\lambda_k)$ is a Jordan block associated with some $\lambda_k \in K$, and with $r_1 + \cdots + r_m = n$.
