

16.9 Problems	607
17 Spectral Theorems	611
17.1 Introduction	611
17.2 Normal Linear Maps: Eigenvalues and Eigenvectors	611
17.3 Spectral Theorem for Normal Linear Maps	617
17.4 Self-Adjoint and Other Special Linear Maps	622
17.5 Normal and Other Special Matrices	628
17.6 Rayleigh–Ritz Theorems and Eigenvalue Interlacing	631
17.7 The Courant–Fischer Theorem; Perturbation Results	636
17.8 Summary	639
17.9 Problems	640
18 Computing Eigenvalues and Eigenvectors	647
18.1 The Basic QR Algorithm	649
18.2 Hessenberg Matrices	655
18.3 Making the QR Method More Efficient Using Shifts	661
18.4 Krylov Subspaces; Arnoldi Iteration	666
18.5 GMRES	670
18.6 The Hermitian Case; Lanczos Iteration	671
18.7 Power Methods	672
18.8 Summary	674
18.9 Problems	675
19 Introduction to The Finite Elements Method	677
19.1 A One-Dimensional Problem: Bending of a Beam	677
19.2 A Two-Dimensional Problem: An Elastic Membrane	688
19.3 Time-Dependent Boundary Problems	691
20 Graphs and Graph Laplacians; Basic Facts	699
20.1 Directed Graphs, Undirected Graphs, Weighted Graphs	702
20.2 Laplacian Matrices of Graphs	709
20.3 Normalized Laplacian Matrices of Graphs	713
20.4 Graph Clustering Using Normalized Cuts	717
20.5 Summary	719
20.6 Problems	720
21 Spectral Graph Drawing	723
21.1 Graph Drawing and Energy Minimization	723
21.2 Examples of Graph Drawings	726
21.3 Summary	730
22 Singular Value Decomposition and Polar Form	733
