Proposition 22.4. *Given any two Euclidean spaces E and F, where E has dimension n and F has dimension m, for any linear map $f\colon E \to F$, we have*

$$\begin{aligned}
\operatorname{Ker} f &= \operatorname{Ker}(f^* \circ f),\\
\operatorname{Ker} f^* &= \operatorname{Ker}(f \circ f^*),\\
\operatorname{Ker} f &= (\operatorname{Im} f^*)^{\perp},\\
\operatorname{Ker} f^* &= (\operatorname{Im} f)^{\perp},\\
\dim(\operatorname{Im} f) &= \dim(\operatorname{Im} f^*),
\end{aligned}$$

and f, f^*, $f^* \circ f$, and $f \circ f^*$ have the same rank.

Proof. To simplify the notation, we will denote the inner products on E and F by the same symbol $\langle -, - \rangle$ (to avoid subscripts). If $f(u) = 0$, then $(f^* \circ f)(u) = f^*(f(u)) = f^*(0) = 0$, and so $\operatorname{Ker} f \subseteq \operatorname{Ker}(f^* \circ f)$. By definition of f^*, we have

$$\langle f(u), f(u) \rangle = \langle (f^* \circ f)(u), u \rangle$$

for all $u \in E$. If $(f^* \circ f)(u) = 0$, since $\langle -, - \rangle$ is positive definite, we must have $f(u) = 0$, and so $\operatorname{Ker}(f^* \circ f) \subseteq \operatorname{Ker} f$. Therefore,

$$\operatorname{Ker} f = \operatorname{Ker}(f^* \circ f).$$

The proof that $\operatorname{Ker} f^* = \operatorname{Ker}(f \circ f^*)$ is similar.

By definition of f^*, we have

$$\langle f(u), v \rangle = \langle u, f^*(v) \rangle \quad \text{for all } u \in E \text{ and all } v \in F. \tag{$*$}$$

This immediately implies that

$$\operatorname{Ker} f = (\operatorname{Im} f^*)^{\perp} \quad \text{and} \quad \operatorname{Ker} f^* = (\operatorname{Im} f)^{\perp}.$$

Let us explain why $\operatorname{Ker} f = (\operatorname{Im} f^*)^{\perp}$, the proof of the other equation being similar.

Because the inner product is positive definite, for every $u \in E$, we have

- $u \in \operatorname{Ker} f$
- iff $f(u) = 0$
- iff $\langle f(u), v \rangle = 0$ for all v,
- by $(*)$ iff $\langle u, f^*(v) \rangle = 0$ for all v,
- iff $u \in (\operatorname{Im} f^*)^{\perp}$.
